

MG-Krete™ is ideal for a virtually unlimited range of concrete repairs, including shallow patching, filling cracks and in several cases filled 16” sections where the concrete hangar floor was removed. W&S enjoyed the fact MG-Krete™ cures rapidly in ALL weather conditions—including some pretty cold Mojave Desert mornings. The areas serviced were completed and returned in just around 1 hour.

Here's a couple of nice links to get a better feel of the technology we're building for;

<http://www.space.com/13919-dream-team-announces-cheap-access-space-venture.html>

<http://www.stratolaunch.com/>

The Stratolaunch, which will be the world's largest airplane, will weigh 1.2 million pounds, with a 385-foot wingspan. Plans call for six jet engines like those used on 747s and a booster rocket engine. W&S had no trouble in choosing the non-flammable and highly heat resistant MG-Krete™ material—that does not shrink upon curing and sets stronger than concrete within two hours.
